

Casebook Feature Demo

A Demonstration of Casebook and New York Noir Tools

by Jesse Reichler

v2.7 - 6/7/25

SUMMARY

A demo case to show some features of Casebook.

- **Author:** Jesse Reichler <jessereichler@gmail.com>
- **Status:** Testing
- **Game system:** nyNoir
- **Case date:** 1/2/1930
- **Difficulty:** 1 out of 5
- **Playtime:** 2 hours
- **Cautions:** Suitable for all audiences
- **Compiled:** Sunday, June 08, 2025 at 02:08 AM / Casebook v4.59 (6/8/25)
- **Typesetting:** 10pt letter twosided (xelatex)
- **Stats:** 46 Leads / 17 Docs / 3 Markers / 3 Images / 2 Days / 13.1k Words (292 avg.) / 107.8 KB

Instructions

To play this case you will need the v2 base set from New York Noir (<https://www.nynoir.org>).

"Childhood is the first great adventure of the human mind."

- Sherlock Holmes

Thursday, June 10th, 1915

10 AM - Thursday, June 10th, 1915

Markdown syntax examples

Demonstration of Markdown syntax:

This text will be italic

This text will be bold

~~This text will be Strikethrough~~

This text will be bold and italic

This text will be underlined.

Here's a list which should show some nested indenting:

- list
- items
- nested list

Here is the first of two lines with a forced blank line in between

Here is the second line. You can also force spaces between words like this.

Text that is a block quote and should be indented.

Demo of Tags/markers (setting and testing)

Gaining markers

 Circle **Document 1** in your case log. You have gained access to **Document 1** (Memo sheet on Jacob Thomson), which can be found at the back of this case book on [page 36](#).

 Circle **Marker A1** in your case log.

 Marker B1 in your case log.

 Strike through **Marker B1** in your case log.

Marker Checking Section

If you have circled **Marker B1** in your case log, then go to the end.

If you have circled in your case log **both** of the following 2 items (**Marker A1** and **Marker B1**), then go to the end.

If you have underlined **Marker A1** in your case log, then

 Circle **Marker A1** in your case log.

CONTINUED ON NEXT PAGE

If you have marked in any way (circled, underlined, etc.) **Marker B1** in your case log, then say goodnight.

If you want to combine you may have to customize box stuff:

 If you have underlined but **not** circled **Marker A1** in your case log, then circle **Marker A1** in your case log.

If you have circled in your case log *any* of the following 3 items (**Marker A1**, **Marker B1**, or **Marker C1**), then go to the end.

If you have circled in your case log **all** of the following 3 items (**Marker A1**, **Marker B1**, and **Marker C1**), then go to the end.

Here are some more advanced commands for combining instructions that are common in something like Razorhurst Blood Alley, where there are certain phrasing that happens a lot:

 If you have underlined but **not** circled **Marker A1** in your case log, then circle **Marker A1** in your case log, and go to [2-4261 \(p.29\)](#).

 If you have circled but **not** struck-through **Marker A1** in your case log, then strike through **Marker A1** in your case log, and go to [2-4261 \(p.29\)](#).

Other kinds of markers and tracks

Tracks can be used for arbitrary things, and are just places on the case log:

 In your case log, record that the current value of **track A** is: **10**.

 In your case log, record that the current value of **track B** is: **4**.

 In your case log, **increase** the current value of **track A** by **+2**.

 In your case log, **reduce** the current value of **track B** by **1**.

 In your case log, **increase** the current value of **track A** by **+2**, but not greater than 10.

 In your case log, **reduce** the current value of **track B** by **1**, but not less than 0.

CONTINUED ON NEXT PAGE

 In your case log, record that the current value of **track C** is: **"tired"**.

Checkboxes

☒ Tick **3** demerit boxes in your case log.

☒ Tick **3** culture boxes in your case log.

Fingerprints

You find a fingerprint:

The Fingerprint!

image text combo

Here is some text where the intention is that the text wrap around the image; note that this is still a bit flakey; I think it works fine as long as the text is in one big paragraph, like DropCaps, but if you break the text into multiple paragraphs it won't quite wrap around the image perfectly, and weird wrapping artefacts will show up. So it's not that useful a feature and might be best avoided. You can see how it also doesn't perfectly determine a nice tight boundary around the image. Too bad, as you would think this might be a handy affect that latex would be well suited for.

fingerprint sets

Let's examine the whole set from this criminal:

fingerprint unknown

Here's two fingerprints that are unknown:

UNK555

CONTINUED ON NEXT PAGE

Drop caps examples

Here is a drop caps example on the first letter with default options:

Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia, looked up one of the more obscure Latin words, consectetur, from a Lorem Ipsum passage, and going through the cites of the word in classical literature, discovered the undoubtable source.

And here is another drop cap example, this time on the whole first word:

AND contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia, looked up one of the more obscure Latin words, consectetur, from a Lorem Ipsum passage, and going through the cites of the word in classical literature, discovered the undoubtable source.

STOP!

Stop reading this case book now, and begin searching for leads in the directories.
Continue to the next page only when you are ready to end **day 1**.

Day Two

Here is day two

LEADS

STOP!

WARNING! Do **not** read through the rest of this document like a book from beginning to end. Lead entries are meant to be read individually only when you look up a lead by its number.

Close this book now and follow rulebook instructions for looking up leads.

1

1-4382

Here is the lead you will visit if you identify the fingerprint.

Time advances 60 minutes.

1-4951

"Thomson, Jacob" (2-8920 on p.29) contd.

You knock on the door but no one answers. Return to [2-8920 \(p.29\)](#).

2

2-4261

The Old Man's Grocery Storey

Here's an example of a lead whose lead # is generated automatically. Note we can jump to it by referring to its id.

Time advances 60 minutes.

2-8920

"Thomson, Jacob"
303 E. 8th St, LE

Now we give the player a couple of choices using the inline function or a simple jump.

Here's an inline statement which automatically tells them to come back.

If you want to knock on the door, go to [1-4951 on p.28](#), and then return here.

Otherwise, if you want to kick down the door, go to [7-1478 on p.32](#).

Or, if you decide to do some shopping, go to [2-4261 \(p.29\)](#).

Time advances 60 minutes.

5

5-1068

Billups, J. - Apt. 2c
351 W. 114th St, CH (apt. 2c)

Here's an example of a lead whose actual contents are copied by several others.

6

6-3172

Hint for Marker A1 ([p.72](#)) contd.

Hint: There is no good hint here.

☒ If this hadn't already occurred to you, mark **2** demerit boxes in your case log.

7

7-0031

*Porta, M - Apt. 2b
351 W. 114th St, CH (apt. 2b)*

Here's an example of a lead whose actual contents are copied by several others.

7-1478

"Thomson, Jacob" (2-8920 on p.29) contd.

You try to kick down the door but you break your foot.

7-3019

*Scheier, N. - Apt. 2a
351 W. 114th St, CH (apt. 2a)*

Here's an example of a lead whose actual contents are copied by several others.

7-8927

*Thomsen, R.
351 W. 114th St, CH (apt. 2d)*

The Monterey Apartments building is a short little structure, just two stories tall, with no doorman in sight, and open to the street. The sidewalk is bustling with activity, and I hear

strange discordant notes of music from some place nearby that I can't quite wrap my head around. I walk past the maintenance guy's apartment and knock on apartment 2d, and after a long while the door creaks open, but only a few inches wide.

Here's a normal lead.

Time advances 60 minutes.

8

8-6011

Harris, A. - Apt. 2f
351 W. 114th St, CH (apt. 2f)

Here's an example of a lead whose actual contents are copied by several others.

DOCUMENTS

STOP!

Do **not** access the documents section unless directed to retrieve a specific document.

Document 1

Memo sheet on Jacob Thomson, from [Demo of Tags/markers \(setting and testing\)](#) (p.8)

Name: Jacob Thomson

Age: 18-20(?)

Race: Caucasian

Occupation: Taxi Cab Driver(?)

On the afternoon of Wednesday, June 9th, suspect was seen by witnesses running from the Tallerico bakery in Little Italy, which had just been robbed. Suspect description by bakery owners was unclear.

No answer to knocking on door of suspect's last known home address, but caller identifying himself as Thomson called in to Police Headquarters Wednesday evening at 8pm, and agreed to come in for a sitdown interview on Thursday, June 10th, at 8am.

FOCH FINDS GERMANY HAS FRAME FOR ARMY ON PRE-WAR SCALE

BY EDWIN E. JAMES

This is the text of the article. Write as much as you want here.

The city is, rather, a state of mind, a body of customs and traditions, and of the organized attitudes and sentiments that inhere in these customs and are transmitted with this tradition. The city is not, in other words, merely a physical mechanism and an artificial construction.

It is involved in the vital processes of the people who compose it; it is a product of nature, and particularly of human nature.

The city has, as Oswald Spengler has recently pointed out, its own culture: "What his house is to the peasant, the city is to civilized man. As the house has its household gods, so has the city its protecting Deity, its local saint. The city also, like the peasant's hut, has its roots in the soil." [1]

Suspect John Doe

The city has been studied, in recent times, from the point of view of its geography, and still more

recently from the point of view of its ecology. There are forces at work within the limits of the urban community—within the limits of any natural area of human habitation, in fact—which tend to bring about an orderly and typical grouping of its population and institutions.

PLAY JURY ADOPTED; TRIAL TO BE SECRET

Transportation and communication, tramways and telephones, newspapers and advertising, steel construction and elevators—all things, in fact, which tend to bring about at once a greater mobility and a greater concentration of the urban populations—are primary factors in the ecological organization of the city.

The city is not, however, merely a geographical and ecological unit; it is at the same time an economic unit. The economic organization of the city is based on the division of labor. The multiplication of occupations and professions within the limits of the urban population is one of the most striking and least understood aspects of modern city life.

From this point of view, we may, if we choose, think of the city, that is to say, the place and the people, with all the machinery and administrative devices that go with them, as organically related; a kind of psychophysical mechanism in and through which private and political interests find not merely a collective but a corporate expression.

Much of what we ordinarily regard as the city—its charters, formal organization, buildings, street railways, and so forth—is, or seems to be, mere artifact. But these things in themselves are utilities, adventitious devices which become part of the living city only when, and in so far as, through use and wont they connect themselves, like a tool in the hand of man, with the vital forces resident in individuals and in the community.

The city is, finally, the natural habitat of civilized man. It is for that reason a cultural area characterized by its own peculiar cultural type:

"It is a quite certain, but never fully recognized, fact," says Spengler, "that all great cultures are

city-born. The outstanding man of the second generation is a city-building animal. This is the actual 3riterion of world-history, as distinguished from the history of mankind: world-history is the history of city men. Nations, governments, politics, and religions—all rest on the basic phenomenon of human existence, the city." [2]

Anthropology, the science of man, has been mainly concerned up to the present with the study of primitive peoples. But civilized man is quite as interesting an object of investigation, and at the same time his life is more open to observation and study. Urban life and culture are more varied, subtle, and complicated, but the fundamental motives are in both instances the same.

The same patient methods of observation which anthropologists like Boas and Lowie have expended on the study of the life and manners of the North American Indian might be even more fruitfully employed in the investigation of the customs, beliefs, social practices, and general conceptions of life prevalent in Little Italy on the lower North Side in Chicago, or in recording the more sophisticated folkways of the inhabitants of Greenwich Village and the neighborhood of Washington Square, New York.

SENATE TALKS ON AS JAM TIGHTENS

We are mainly indebted to writers of fiction for our more intimate knowledge of contemporary urban life. But the life of our cities demands a more searching and disinterested study than even Émile Zola has given us in his "experimental" novels and the annals of the Rougon-Macquart family.

We need such studies, if for no other reason than to enable us to read the newspapers intelligently. The reason that the daily chronicle of the newspaper is so shocking, and at the same time so fascinating, to the average reader is because the average reader knows so little about the life of which the newspaper is the record.

The observations which follow are intended to define a point of view and to indicate a program for the study of urban life: its physical organization, its occupations, and its culture.

FOCH FINDS GERMANY HAS FRAME FOR ARMY ON PRE-WAR SCALE

By Edwin E. James

This is the text of the article. Write as much as you want here.

The city is, rather, a state of mind, a body of customs and traditions, and of the organized attitudes and sentiments that inhere in these customs and are transmitted with this tradition. The city is not, in other words, merely a physical mechanism and an artificial construction.

Suspect John Doe

The city has, as Oswald Spengler has recently pointed out, its own culture: "What his house is to the peasant, the city is to civilized man. As the house has its household gods, so has the city its protecting Deity, its local saint. The city also, like the peasant's hut, has its roots in the soil." [1]

The city has been studied, in recent times, from the point of view of its geography, and still more recently from the point of view of its ecology. There are forces at work within the limits of the urban community—within the limits of any natural area of human habitation, in fact—which tend to bring about an orderly and typical grouping of its population and institutions.

PLAY JURY ADOPTED; TRIAL TO BE SECRET

Transportation and communication, tramways and telephones, newspapers and advertising, steel construction and elevators—all things, in fact, which tend to bring about at once a greater mobility and a greater concentration of the urban populations—are primary factors in the ecological organization of the city.

The city is not, however, merely a geographical and ecological unit; it is at the same time an economic unit. The economic organization of the city is based on the division of labor. The multiplication of occupations and professions within the limits of the urban population is one of the most striking and least understood aspects of modern city life.

From this point of view, we may, if we choose, think of the city, that is to say, the place and the people, with all the machinery and administra-

tive devices that go with them, as organically related; a kind of psychophysical mechanism in and through which private and political interests find not merely a collective but a corporate expression.

Much of what we ordinarily regard as the city—its charters, formal organization, buildings, street railways, and so forth—is, or seems to be, mere artifact. But these things in themselves are utilities, adventitious devices which become part of the living city only when, and in so far as, through use and wont they connect themselves, like a tool in the hand of man, with the vital forces resident in individuals and in the community.

The city is, finally, the natural habitat of civilized man. It is for that reason a cultural area characterized by its own peculiar cultural type:

"It is a quite certain, but never fully recognized, fact," says Spengler, "that all great cultures are city-born. The outstanding man of the second generation is a city-building animal. This is the actual 3critrion of world-history, as distinguished from the history of mankind: world-history is the history of city men. Nations, governments, politics, and religions—all rest on the basic phenomenon of human existence, the city." [2]

Anthropology, the science of man, has been mainly concerned up to the present with the study of primitive peoples. But civilized man is quite as interesting an object of investigation, and at the same time his life is more open to observation and study. Urban life and culture are more varied, subtle, and complicated, but the fundamental motives are in both instances the same.

The city is, rather, a state of mind, a body of customs and traditions, and of the organized attitudes and sentiments that inhere in these customs and are transmitted with this tradition. The city is not, in other words, merely a physical mechanism and an artificial construction.

It is involved in the vital processes of the people who compose it; it is a product of nature, and particularly of human nature.

The city has, as Oswald Spengler has recently pointed out, its own culture: "What his house is to the peasant, the city is to civilized man. As the house has its household gods, so has the city its protecting Deity, its local saint. The city also, like the peasant's hut, has its roots in the soil." [1]

The city has been studied, in recent times, from the point of view of its geography, and still more recently from the point of view of its ecology. There are forces at work within the limits of the urban community—within the limits of any natural area of human habitation, in fact—which tend to bring about an orderly and typical grouping of its population and institu-

tions.

Suspect John Doe

The science which seeks to isolate these factors and to describe the typical constellations of persons and institutions which the co-operation of these forces produce, is what we call human, as distinguished from plant and animal, ecology.

PLAY JURY ADOPTED; TRIAL TO BE SECRET

Transportation and communication, tramways and telephones, newspapers and advertising, steel construction and elevators—all things, in fact, which tend to bring about at once a greater mobility and a greater concentration of the urban populations—are primary factors in the ecological organization of the city.

The city is not, however,

merely a geographical and ecological unit; it is at the same time an economic unit. The economic organization of the city is based on the division of labor. The multiplication of occupations and professions within the limits of the urban population is one of the most striking and least understood aspects of modern city life.

From this point of view, we may, if we choose, think of the city, that is to say, the place and the people, with all the machinery and administrative devices that go with them, as organically related; a kind of psychophysical mechanism in and through which private and political interests find not merely a collective but a corporate expression.

Much of what we ordinarily regard as the city—its charters, formal organization, buildings, street railways, and so forth—is, or seems to be, mere artifact. But these things in themselves are utilities, adventitious devices which become part of the living city only when, and in so far as, through use and wont they connect themselves, like a tool in the hand of man, with the vital forces resident in individuals and in the community.

"It is a quite certain, but never fully recognized, fact," says Spengler, "that all great cultures are city-born. The outstanding man of the second generation is a city-building animal. This is the actual criterion of world-history, as distinguished from the history of mankind: world-history is the history of city men. Nations, governments, politics,

and religions—all rest on the basic phenomenon of human existence, the city." [2]

Anthropology, the science of man, has been mainly concerned up to the present with the study of primitive peoples. But civilized man is quite as interesting an object of investigation, and at the same time his life is more open to observation and study. Urban life and culture are more varied, subtle, and complicated, but the fundamental motives are in both instances the same.

SENATE TALKS ON AS JAM TIGHTENS

We are mainly indebted to writers of fiction for our more intimate knowledge of contemporary urban life. But the life of our cities demands a more searching and disinterested study than even Émile Zola has given us in his "experimental" novels and the annals of the Rougon-Macquart family.

We need such studies, if for no other reason than to enable us to read the newspapers intelligently. The reason that the daily chronicle of the newspaper is so shocking, and at the same time so fascinating, to the average reader is because the average reader knows so little about the life of which the newspaper is the record.

Conclusion

You are about to read the final questions for this case. Once you read them, there is no going back into the field.

Even if you have already found all of the required markers for the final day, you may now continue to play the final day of the case and resume searching for leads for as long as you like with no penalty.

Proceed to the final questions only when you are ready to end your investigation.

STOP!

Proceed only when you are ready to answer questions.

Questions

Read and answer the following questions. You may re-reread any previously visited leads to refresh your memory but you may not visit new leads at this point.

Q1. How are you feeling today?

Q2. How did you like the game?

Q3. No, really, how are you feeling?: _____ [5 points]

Q4. Who died?

Victim: _____ [10 points]

Q5. What was the motive?

Q6. Choose one and only one of the following:

- ☐ Fake and **not** worth buying
- ☐ Real and worth buying
- ☐ Other: _____

CONTINUED ON NEXT PAGE

Q7. Choose all that apply:

- ☐ red
- ☐ yellow
- ☐ green
- ☐ blue
- ☐ Other: _____

Q8. Choose all that apply:

- ☐ a) red
- ☐ b) yellow
- ☐ c) green
- ☐ d)blue
- ☐ Other: _____

Epilogue - Brooklyn Heights 1935

I'm back in 1935, standing over my kitchen table with the empty glass of whiskey in my hand. Back up on the step stool, and back goes the bottle and the unwashed glass alongside it.

Final Scoring

Calculate your final score by assessing how well you answered each question, assigning partial credit as you see fit.

Behind the Scenes: Postscript from the Author

This is where the author might write some info about how they wrote the case, whether it was based on a true story, etc.

Full Walkthrough

Here's one way an experienced detective might have solved the case:

Turn 1: Visit the scene of the crime (1-1978: Tallerico and Brother Bakery)

From the suspect sheet we are told the name of the store that was robbed, the Tallerico and Brother Baker in Little Italy. We could look that up in the White pages by name, under Tallerico, or by using the Yellow pages to find Bakeries.

Etc..

HINTS

STOP!

Do **not** access the hints section except when looking up a specific hint from the table of contents at the start of this case book.

Hint for Marker A1

☒ Tick 2 demerit boxes in your case log.

See if you can figure out how to confirm the identity of the robber.

For another hint, go to [6-3172 on p.31](#).

If you still need help, as a last resort ☒ Tick 3 demerit boxes in your case log, then visit the following lead where this item is obtained:

- [Demo of Tags/markers \(setting and testing\) on p.8](#)

twocol fingerprint set hint
